The Brain

- Forward/Neutral/Reverse Option
- Activate or Deactivate Auger
- Pressure Gauge
- Temperature Sensor
- Automatic Shutoff

The Heart

- PTO Driven - Hydrostatic Pump
- Up To 3.78 l/m and 41368 kPa
- Three-Way Gearbox for Simultaneous Auger/Track Usage

The Muscle

- Hydraulic Motors Integrated into Read Hubs
- Max Assisted Speed of 13 KM/H
- Automatic Free-Wheel When Inactive
- Designed for Hydrostatic Assist

How Does It Work?

The simple electronic control of the hydraulic system works automatically in either forward or reverse when set to the mode of action you desire. When activated the system matches ground speed from the tractor's radar to maintain control. The amount of power applied is controlled by the operator using the dial on the screen. Hit the boost button to instantly apply 100% power to the system to get through those tough spots.
