

***CropMaster***

***Elmer's Header and Pick-Up***

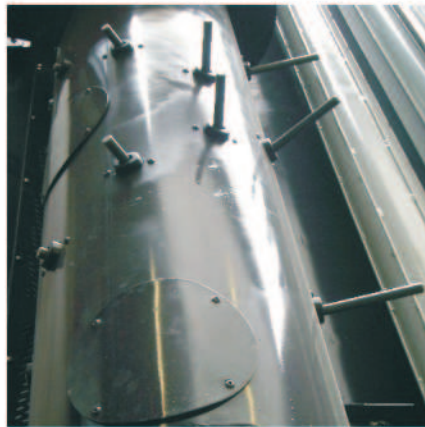

**Your harvest specialist for a clean crop  
in the bin — not on the field.**

**For use with your edible beans and cereals.**

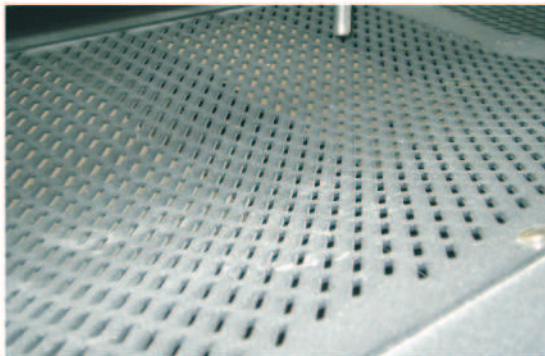

The tough 26" floating auger and 5" flighting delivers smoother higher volume feeding for today's large capacity combines.

Fall-out protection steel, or alternate composite fingers prevent combine rotor damage.

The rugged 12 gauge 45° angle slotted screen ensures dirt removal before it gets to your combine. Optional solid pan available.

The 9 bar Pick-Up gently lifts and conveys your swath to minimize shatter in crops such as canola and edible beans. In uneven terrain, the torsion flex system follows the ground to pick up all the crop. The CropMaster Head and Elmer's Pick-Up, designed to harvest when you are ready.

## Available in 14', 22' and 30' widths.

## Adapters to fit most combine makes and models.

*Due to continual progression, design and specifications subject to change.*
